

GDS environmentally friendly and safe drilling fluids & lubricants *from Matex*

THREAD COMPOUND

- THREAD COMPOUND has a unique formula providing excellent protection against thread wear, galling and seizing for tool joints
- THREAD COMPOUND is free from both petroleum oil carriers and all heavy metals, such as Aluminium, Copper, Lead, Zinc and Lithium complexes
- THREAD COMPOUND is classified as non-hazardous to health and environment and developed for all kinds of drilling where otherwise petroleum based oils are used
- THREAD COMPOUND gives very good adhesion and is highly resistant to water wash-off as well as to corrosion
- THREAD COMPOUND should therefore be the natural choice of lubricant for all kinds of drilling when you want to avoid contamination of soil and groundwater by adding heavy metals and petroleum based products
